NEXOR[®]

messageware[®]

NEXOR delivers mission critical solutions to organizations demanding a robust, secure and scalable messaging infrastructure. To meet these requirements, NEXOR has developed Messageware, a comprehensive suite of high performance messaging and directory products that are widely acclaimed for their adherence to industry standards and conformance criteria.

NEXOR has focused on messaging and directory systems as its core business since it began in 1990. NEXOR has a proven track record of teaming successfully with major systems integrators and has unrivalled experience in environments demanding high assurance messaging, interworking systems and third party integration.

Today, NEXOR products are at the heart of enterprise-class solutions in major government and defense agencies and leading commercial organizations throughout North America and Europe.

All products from NEXOR's Messageware suite have been independently tested for Year 2000 compliance by NCC

Messageware

Messageware is the NEXOR suite of industrial-strength messaging and directory clients, servers and value-added products. The Messageware suite meets standards from the Internet, ISO and defense communities and has gained recognition for its excellence all over the world. Products from the suite are used by the US Department of Defense Joint Interoperability Test Command (JITC) and the UK National Computing Centre (NCC) as the reference platform against which other standards-based products are measured.

Customer Benefits

The Messageware product suite provides the following key customer benefits:

- High assurance messaging featuring sector specific security protocols, message traceability and high availability.
- Tight integration with Microsoft Exchange and Outlook solutions.
- Proven interworking with products from other messaging vendors.
- A flexible solution to meet an organization's specific requirements.

messageware

High Assurance

NEXOR customers benefit from guaranteed message delivery and message auditing. Support for the Messaging Security Protocol (MSP) and Secure/MIME (S/MIME) provides content confidentiality and integrity. The NEXOR messaging architecture also delivers high availability messaging services, even in hazardous conditions.

Integration

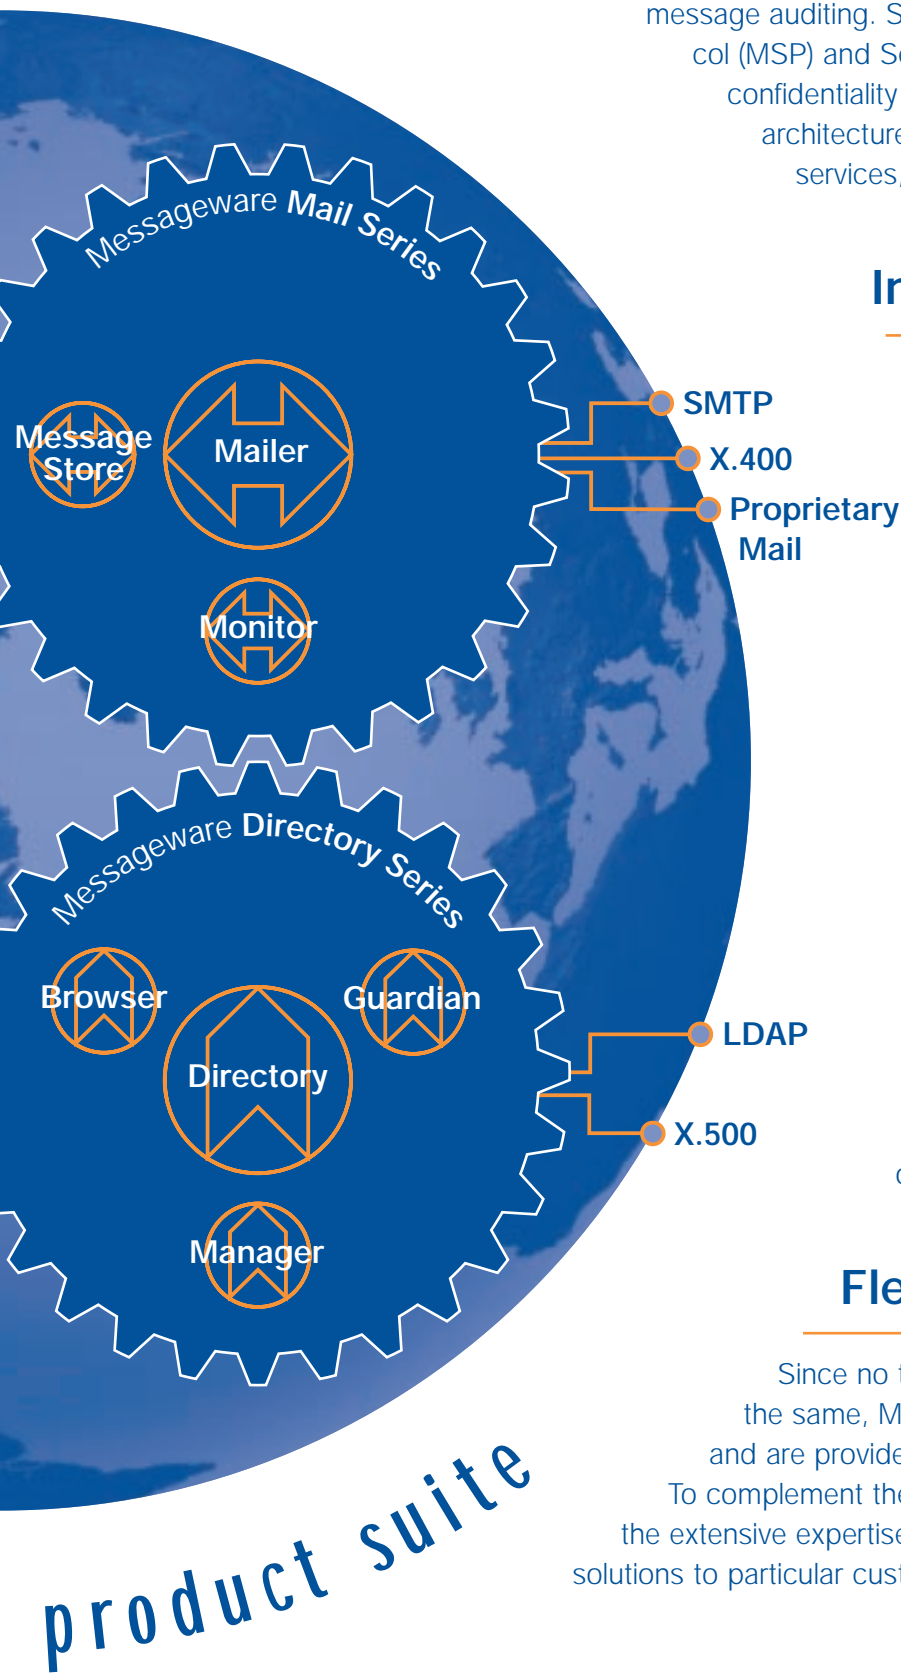

Messageware brings powerful enhancements to the Microsoft suite of mail products, including mission critical, sector specific and structured messaging services. The Messageware Application Programming Interfaces (APIs) also allow for easy integration with other applications.

Interworking

NEXOR Messageware products conform to Internet, ISO and defense community standards. NEXOR pursues an active program of interoperability testing. This ensures that Messageware products interwork with other standards-based messaging products and users benefit from a truly open solution.

Flexibility

Since no two organization's messaging needs are the same, Messageware products are highly flexible and are provided with a list of optional features. To complement the Messageware suite, NEXOR also offers the extensive expertise of its consultancy team to tailor solutions to particular customer requirements.

Messageware **Product Families**

The Messageware suite features the following product families:

Messageware **Mail Series**

As the US GOSIP reference platform, Messageware Mailer is a robust, high-performance messaging system. Features include a P7 message store, APIs, support for X.400, SMTP/MIME and POP3/IMAP, a MIXER gateway, a graphical management interface and a distribution list manager.

Messageware **Directory Series**

The Messageware Directory family of products provides an award-winning directory server that fully supports both X.500 and LDAP. It features a graphical management interface, Web based directory browser, APIs and enhanced security via strong authentication and a directory firewall.

Messageware **Outlook Series**

Messageware Outlook Series features an award-winning product that enhances Microsoft Exchange and Outlook clients to deliver X.400 and sector specific services such as MSP, S/MIME and the military messaging format, P772. Users also benefit from access to enterprise directories via LDAP.

Messageware **Motif Series**

Widely implemented in a range of military programs, Messageware Defender for Motif is a sophisticated messaging and directory client for UNIX users that supports P772 and other enhanced features for military users.
